Alternatives to biocides: Downstream users perspectives

A.I.S.E./CEPE workshop. 15 May, 2019
Jan Lorenzen, Danish Technological Institute
jnl@dti.dk, +45-7220 1836

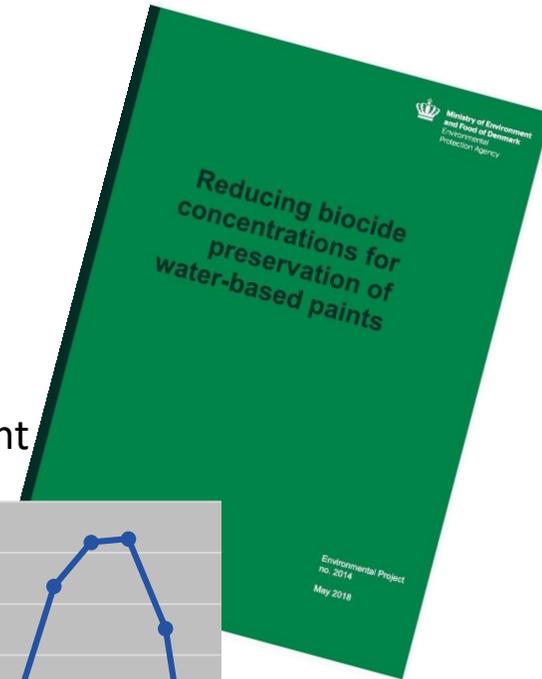

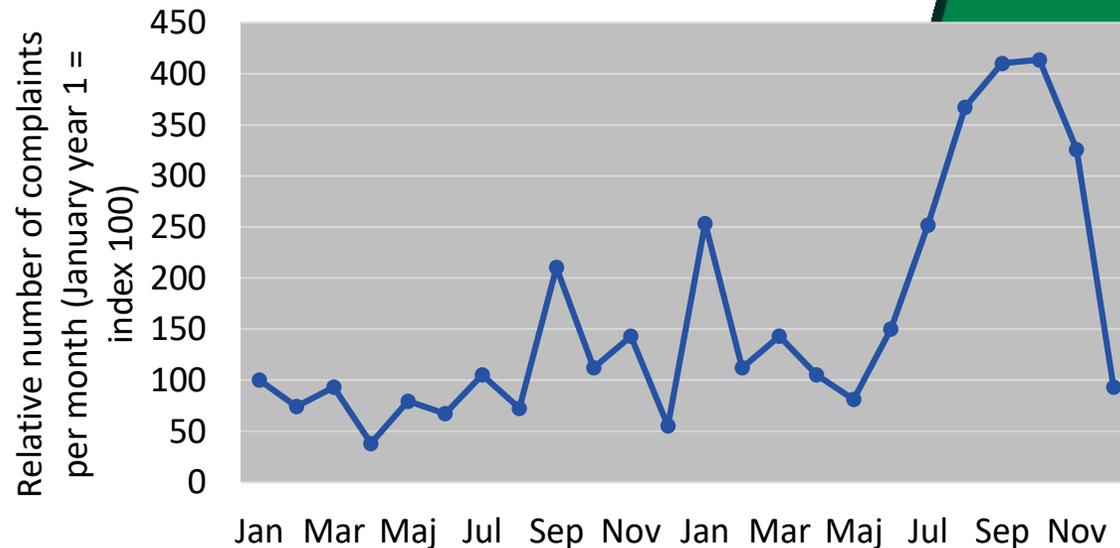

Contamination of paint

- An on-going challenge
→ DK EPA projects

Registered claims for contaminated paint

Why do we need in-can preservation?

- Bacteria can grow in paint
 - Water, organic carbon, nutrients
- Bacteria will enter paint
 - In raw materials
 - During production
 - During use

Production & contamination

- Routine & special microbiological control
- Linking production to contaminated paint

Paint	Bacterium
A	Enterococcus sp.
B	Pseudomonas sp.
C	Pseudomonas sp.
E	Pseudomonas sp.
F	Citrobacter sp.
G	Pseudomonas sp.

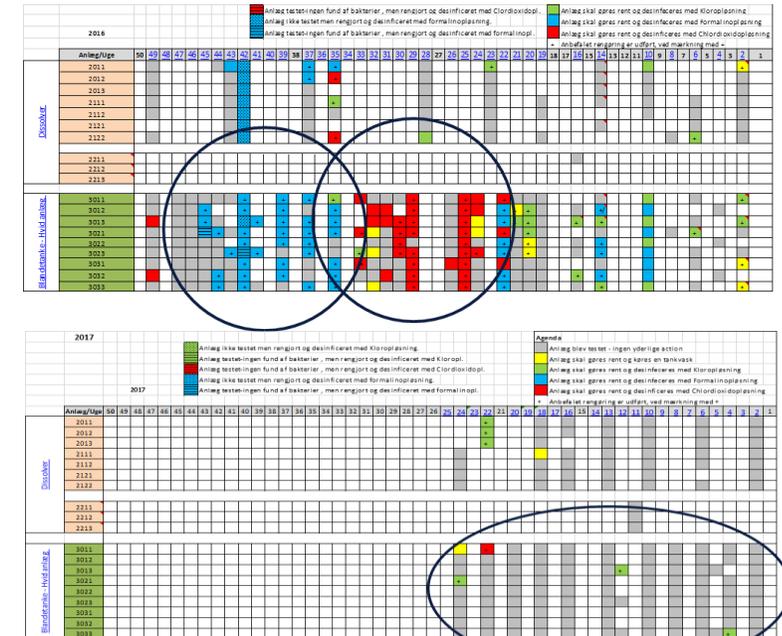

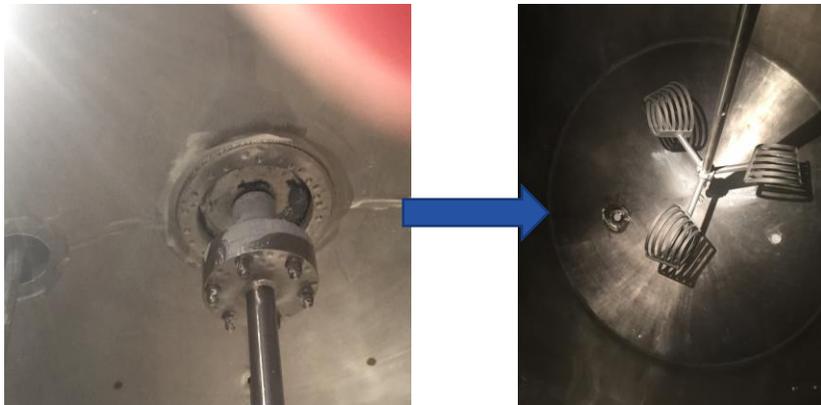

Production	Bacterium
Filling station	Stenotrophomonas sp.
Filter	Stenotrophomonas sp.
Filter	Pseudomonas sp.
Filter	Citrobacter sp.
Filter	Acinetobacter sp.
Filter	Pseudomonas sp.

Factory hygiene

- Hot spot localisation
- Improvement of cleaning and cleanability

Paint development

- Raw materials contain microbes & sustain microbial growth
- Components interact with biocides

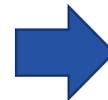

New paint

- Raw material selection can improve preservation

Raw material	Score
Talc 1	1.3
Talc 2	1.8
Talc 3	2.0
Talc 4	2.3
Talc 5	4.0
CaCO ₃ 1	0.0

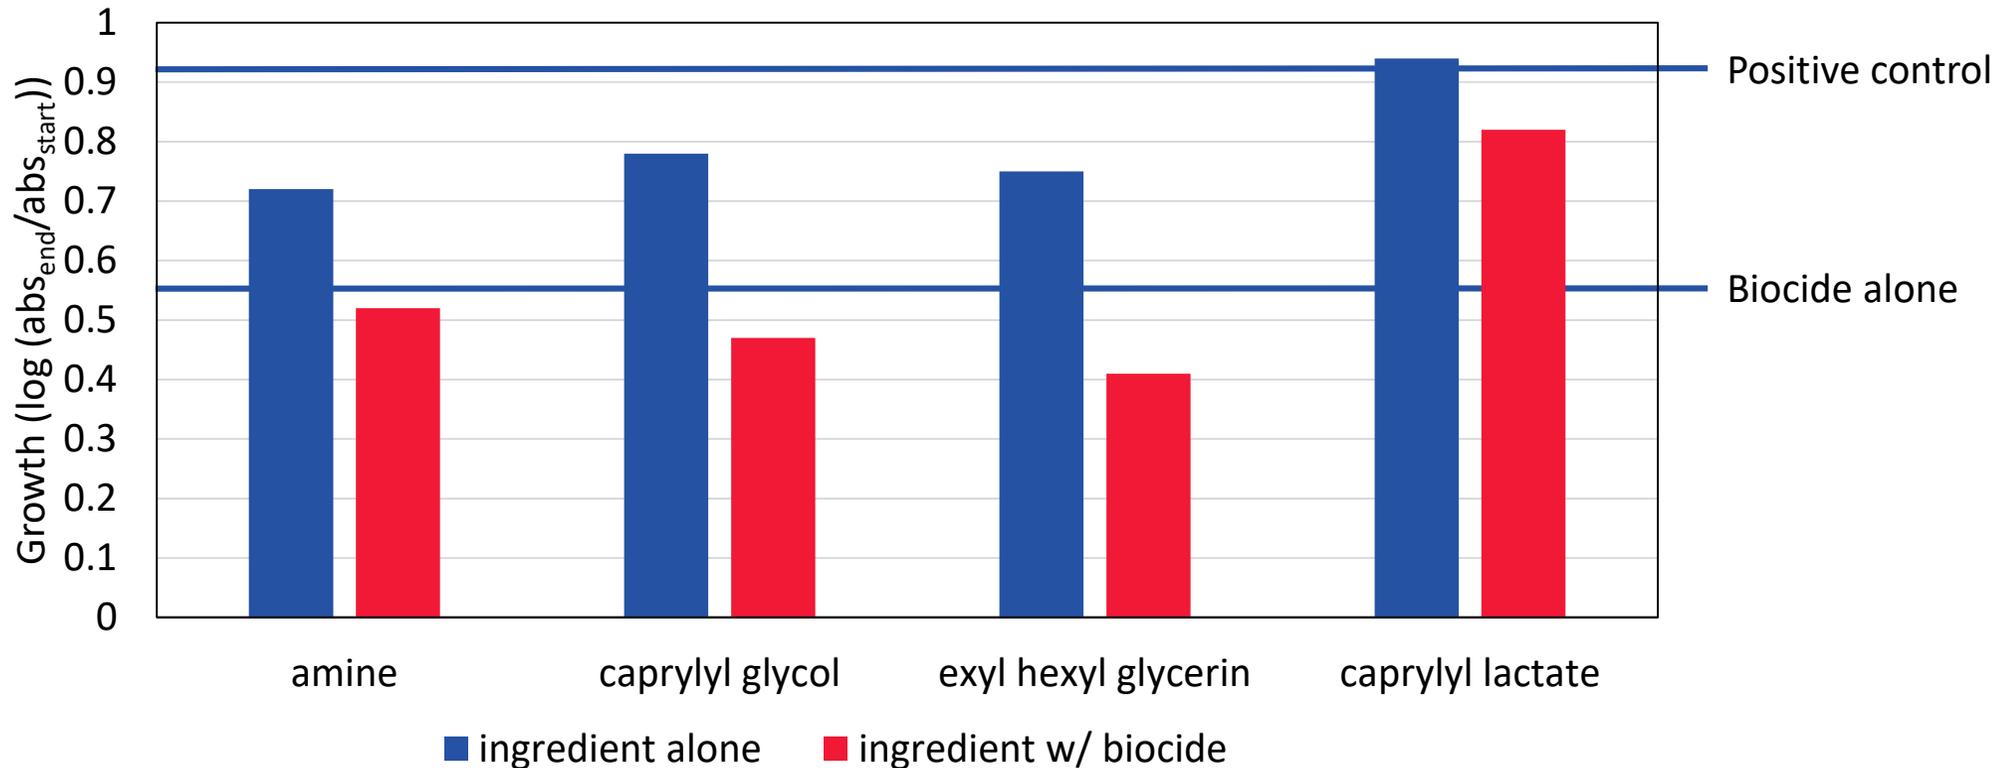

Type	Function
SiO ₂ A	Filler
Dolomite A	Filler
CaCO ₃ C	Filler
Co-polymer A	Antifoam agent
Thickener E	Anionic thickener
Dispersion Agent C	Non-ionic dispersant

Recipe	Score
Standard 81-014	2.6
Test 81-013	2.1
Test 81-012	1.8

Improving biocide effect

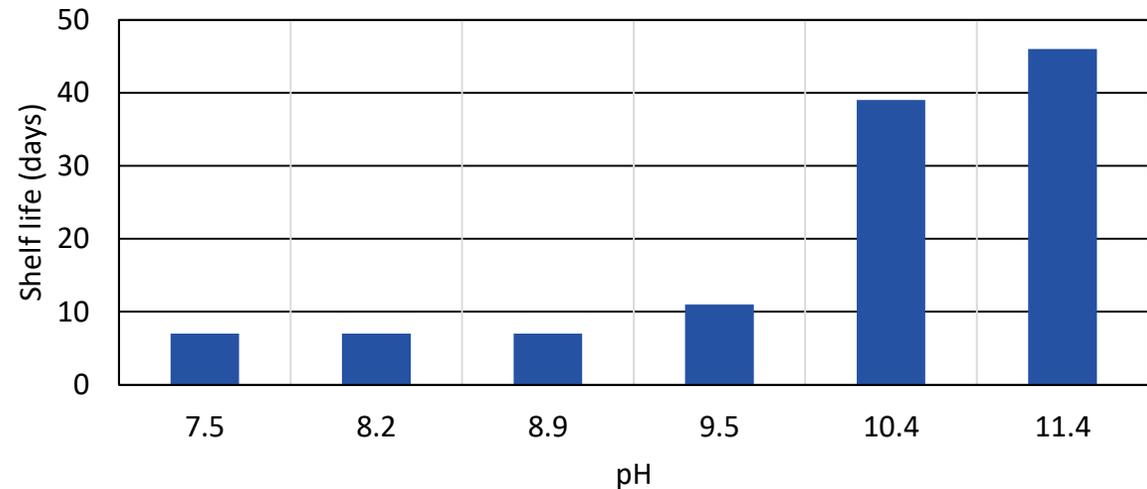

High pH

- Silicate paint w/ high pH 
- Unpreserved interior white matt wall paint w/o added bacteria
 - Not a universal solution

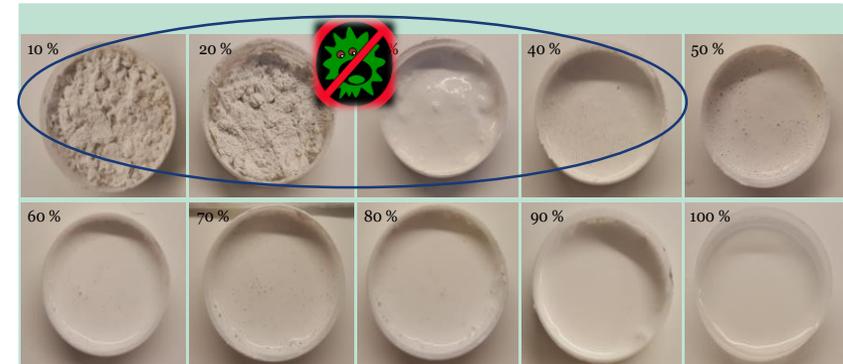

Influence of pH on shelf life of unpreserved paint

Non-biocide preservation

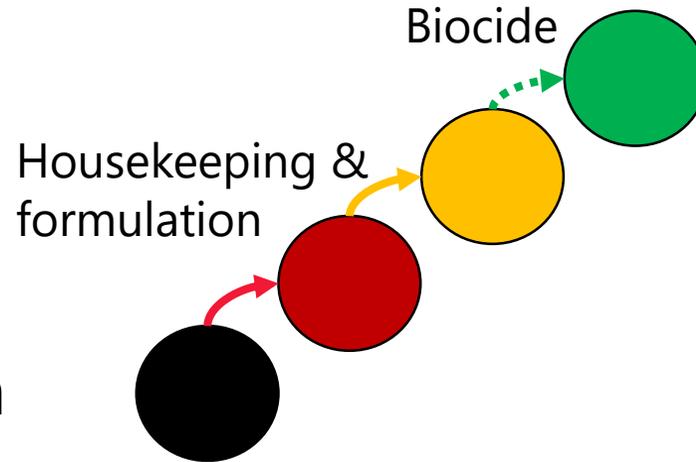

- Pasteurisation → destroys paint
- Adding salts → poor quality paint
- High solid paint → poor quality paint
- High pH → only matt paint
- No water → powder paint

Conclusions

- Paint allows bacterial growth
- Reduce microbial load
 - Raw materials & paint formulation & production hygiene
- Improve biocide effect
 - Paint formulation?

We cannot do without residual biocide effect in-can
